## AS Enterprise Server 2.7.2.p.7 Released

2016-07-19 - Technical Writer - Comments (0) - General

This news post provides version-specific information about the patch release of AS Enterprise Server 2.7.2.p.7.

### New Features

- Added a capability to manage Inactive Time for appliance groups on AS Enterprise Server.
- Added a capability to attach images and PDF files to knowledge base articles.
- Added output of the record indicating that delivery of the task request was canceled by the user in logs.
- Added the mapping of content modules to companies.
- Added the data request from the tablet with AS Mobile Enterprise to AS Enterprise Server fetching identity information (appliance name, location, company).
- Created the automatic mapping of the content hierarchy structure to the specific company.
- Hid the section for enabling / disabling system notifications on AS Enterprise Server.
- Modified the existing rules of registering new appliances on AS Enterprise Server.
- Added a capability to get the information about the Ei Switch connected to appliances.
- Created the Inactive Time Management page on AS Enterprise Server.
- Added a capability to create the Inactive Time delivery task request.
- Added a capability to register a virtual appliance.
- Added a capability to create and manage portrait layouts in Layout Builder.
- Added the parameters defining the number of visitors in the queue for Queue Management System.
- Added the Number of Visitors in Queue parameter into the QMS Configuration delivery request.
- Added a capability to create user accounts on AS Intuition Publisher and synchronize them with AS Enterprise Server.
- Added output of the appliance uptime information in the appliance details.
- Disabled a capability to map default classes of SHOPConnect, SHOWConnect and Navigation App to specific companies.
- Disabled a capability to add content modules (except applications) into default classes of SHOPConnect, SHOWConnect and Navigation App.

- Added output of the company in the Edit Application form.
- Disabled a capability to change the company when moving delivered applications to Content Library of AS Enterprise Server.
- Renamed Power Controller to Ei Switch.
- Added additional information into the ping request from AS Enterprise Server to License Warranty Management Server.
- Corrected the procedure of synchronizing employees and their skills if the appliance group is mapped to the specific location.
- Added output of the uptime information for Ei Switch.
- Added the automatic time shift for playback schemes upon change of the time zone for individual appliance or appliance groups.
- Added the license management for AS Enterprise Server.
- Added a capability to configure NTP Server Host for locations on AS Enterprise Server.
- Added a capability to manage meta movies and add them into sequences.
- Added support for a new player model AAEON (AB100U).
- Added support for new version of AS Mobile Enterprise 3.0.2.
- Added the inheritance of the parent company for all content structure elements besides the class.

#### Resolved Issues

- Resolved the issue with impossibility to select the category for the delivered application in Content Library of AS Enterprise Server.
- Resolved the issue with the incorrect link in breadcrumbs for opening Media Center.
- Resolved the issue with incorrect export of full QMS reporting data after applying filters to reports.
- Resolved the issue with display of incomplete error data when viewing error details in the sequence delivery request.
- Increased the limit of characters for the Hostname field when configuring connection to AS Intuition Publisher.
- Corrected behavior of registering appliances to the existing appliance groups.
- Disabled a capability to select the location when moving an appliance to a new group associated with the same company.
- Added output of the confirmation form when performing the power cycle for the appliance on AS Enterprise Server.
- Resolved the issue with the disabled field for selecting the appliance group when registering the appliance with known parameters.
- Added output of the number of registered tables with AS Mobile Enterprise when viewing license parameters.
- Corrected behavior of adding new CIP accounts for the automatic allowing of

access to tablets with AS Mobile Enterprise.

- Disabled display of the Reboot icon when the Ei Switch is connected to the appliance being offline.
- Resolved the issue with showing the same employee details when viewing employee contacts on the appliance when signing in to the appliance from AS Enterprise Server.
- Resolved the issue with showing the group with Advanced Contextual Sensor Controller as 'Removed Group' when performing delivery task requests.
- Removed the capability to perform the system reset for Advanced Contextual Sensor Controller.
- Resolved the issue with the 1-hour playback shift when creating a multi-day scheme with automatic transition to winter/summer time.
- Added a capability to save empty fields for QMS Server hosts.
- Resolved the issue with the appliance registration on AS Enterprise Server.
- Corrected behavior of showing the message about the supported browsers.
- Resolved the issue with the continuous display of the message about the sensor activation range instead of its disappearance.
- Resolved the issue with showing the incorrect number of active visitation reasons on the list.
- Resolved the issue with the incorrect size of the form for modifying the playback scheme.
- Resolved the issue with impossibility to save the updated application on AS Enterprise Server.
- Resolved the issue with editing the playback scheme.
- Resolved the issue with showing no visitation reasons when viewing them on the second page.
- Resolved the issue with editing a normal and meta movie within the sequence.
- Resolved the issue with showing an error when trying to edit the media item in Content Library of AS Enterprise Server.
- Resolved the issue with showing errors when opening the Setup section of AS Enterprise Server.
